

Designing Visualizations to Tell your Data Stories

Audience

Data Story

.Ask questions...

Who are you communicating with?

What motivates them to engage?

What questions do they want to answer?

What actions do you want them to take?

segment to stakeholder groups

For example

Funders

Potential attendees

Other Festival hosts

understand who they are

Literacy

Analytic capacity

lob function

Level of education and knowledge of your topic

Motivations & Pain Points

Ask questions...

What is your key message?

What data do you have to support that message?

Can you put a human face on the data?

Will you articulate a call to action?

storytelling approaches

Journey Map

Frame your data story around one illustrative person's experience

Pixar story arc

Once upon a time there was ____. Every day, ____. One day ____. Because of that, ____. Because of that, . . Until finally ____.

The TED Approach

Focus on one central idea, and build a beginning, middle and end into the illustration

storyboard

Sketch! Draw! Use a storyboard or simple slide deck to map out the different visuals and messages you want to incorporate.

simplify

Look at your storyboard and sketches. What elements are essential to your data story, and what could you remove?

Disseminate

Ask questions...

final product?

How does your

information?

effectiveness?

Where will you share your

Does this need to be

printed or optimized for

social sharing on the web?

dissemination plan align with

where your audience seeks

What metrics will you use

to measure reach and/or

Declutter

Are there elements of the graph that district rather than helping the reader to understand your data story? Borders, gridlines, and tick marks are often chart defaults but should be used minimally to create a clearer display of data.

Color

Are you using color to highlight the important data? Color used sparingly helps important data stand out. Avoid the trap of feeling like you need to use every color in your branding guide! Also consider black & white printing & the colorblind (avoid red and green together).

Title

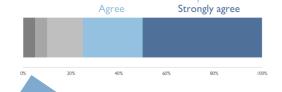

Are you clear and succinct, telling your reader the key takeaway? Use the title to express the main story you want to share from the data, rather than using the title to tell the reader the name of the indicator.

Craft a purposeful title: instead of listing the indicator, tell the participants the key (urgent) message you want them to see in your data

Label the critical data points for your audience, and let the trends in the graphs speak

Our Science Festival increased awareness of the many types of STEM careers.

At the most recent festival, 75% of attendees agreed they were more aware of the many types of STEM careers after attending.

Declutter your charts to make sure the data story resonates clearly: eliminate the "non-data ink" (e.g. border, grid lines) that may distract from the "data ink." repackaging

Think about how you can repackage your visual content or use what you've created as a template.

Idea: Create a blank slide deck, and add one visual per slide (like building a storyboard). Keep adding it to it for your project so you can repurpose and edit content as you need!
